ALMEMO® Input connectors

The intelligent ALMEMO® input connector turns every measuring setup into an exceptionally flexible measuring system. Instead of preconfigured ALMEMO® sensors you can take your own existing sensors. We supply ALMEMO® plugs specially pre-programmed for this purpose with the necessary sensor parameters and the appropriate measuring range. These plugs have six screw terminals and can be easily and conveniently connected.

All devices and plugs offer the following functions:

- Each measuring point can be assigned a specific designation
- Sensor signals can be scaled
- Measured values can be corrected for zero-point and gain

Several measuring instruments offer the following options with the ALMEMO® plug:

- Multi-point calibration data can be saved in the plug.
- User-defined linearization with up to 30 points can be programmed in the plug.
- Control points with actual / setpoint value can be entered easily via the AMR-Control software.
- Any special measuring ranges programmed in the plug can be processed.
- Calibration schedules can be managed in the plug and are detected automatically
- The plug`s exact designation can be called up.

The overall performance quality and the already high level of precision provided by ALMEMO® measuring technology is thus raised even further.

New: Digital ALMEMO® D6- and D7-plugs

Numerous analog sensors and measurable variables can be digitized via the digital ALMEMO® D6 and D7 plugs. Thus, the ALMEMO® system is open for any desired extension of measured variables, measured values, and applications:

- Digital ALMEMO® D6 and D7 plugs enable new measuring ranges and linearization independent of the ALMEMO® device.
- The overall accuracy of the digital ALMEMO® sensor is independent from the ALMEMO® display device / data logger and from the extension cables used. The complete measuring chain, consisting of sensor and connected ALMEMO® D6 or D7 plug (with integrated A/D converter), is calibrated (DAkkS / factory) and can be replaced or exchanged as and whenever necessary.
- The pluggable digital extension cables (see chapter General accessories) provide high transmission reliability.

New: Digital ALMEMO® D7-measurement plugs: Special applications / features

Important! ALMEMO® D7 measurement plugs can only be connected to ALMEMO® measuring instruments of the V7 generation, i.a. ALMEMO® 500, ALMEMO® 710, ALMEMO® 809, ALMEMO® 202.

- Every ALMEMO® D7 plug features up to 10 display and function channels.
- Digital ALMEMO® D7 plugs enable high measuring speeds or a high level of precision. Thus these plugs can be used for a vast variety of measuring tasks
- The ALMEMO® D7 plug measures dynamic processes using the setting High Speed Measuring Options at high sampling rate. In case high resolution and stable values are needed (e.g. for accuracy transducers), the ALMEMO® D7 measurement plug measures with reduced sampling rate, if the setting High Resolution is selected.
- The digital ALMEMO® D7 measurement plug comes with an integrated A/D converter. The measuring rate is solely determined by the A/D converter. All D7 measurement plugs run in parallel on the ALMEMO® V7 measuring instrument with their own measuring rate. This makes it possible to obtain high measuring speeds.
- The measured values can be provided with a unit featuring up to 6 characters. To designate a sensor it is possible to program comments with up to 20 characters.
- The user can easily perform the configuration via the ALMEMO® V7 measuring instrument.

ALMEMO® multi-point adjustment for precisely correcting measuring chains

1. Individual sensor linearization

In addition to the sensor characteristics (e.g. range, dimension, scaling- and limit values, comments) it is now possible to save complete characteristic curves of a sensor in the ALMEMO® plug. This offers the great opportunity to connect also non-linear sensors to the ALMEMO® system whose linearizations (measuring ranges) are not saved to the device itself. Consequently, the variety of sensors compatible with ALMEMO® devices is immensely increased.

Usage

The user is able to carry out the special linearization by himself. By means of the free software ALMEMO® CONTROL a linearization table is converted to an interpolation table containing over 30 basic values and saved onto the ALMEMO® plug. Using the function "consider correction value zero and gradient" the linearization with the already pre-scaled readouts is carried out for a pre-scaled measuring range. This procedure requires an ALMEMO® device (e.g. ALMEMO® 2690-8) featuring the option "KL" (multi-point adjustment and special measuring ranges).

1.	0.54	-6.00	54	0	5024
2.	1.46	0.00	146	600	3058
3.	2.30	9.00	230	1500	5571
4.	3.83	18.00	383	2400	6413
5.	5.20	25.00			

Measuring instrument ALMEMO® 2690-8 with programming option KL

ALMEMO® 2470

The linearization table programmed on the ALMEMO® plug can be saved as a file to the PC and additionally as an Excel table for archiving purposes. O course, it is possible to load the linearization table again from the archived file as well as from the ALMEMO® plug. Consequently, the user is able to access his special linearizations at all times.

Hand units from series ALMEMO® 2470, 2490 as well as 2590 are already able to process ALMEMO® plugs with a programmed characteristic curve as standard. Individual linearizations are possible in all measuring ranges of the ALMEMO® measuring instruments.

2. Maximum precision due to multi-point adjustment

Measurement deviations from a reference or a measurement standard, which were identified during the calibrating of the device, can be used to permanently correct a sensor or a measurement chain. In this case, we speak about adjustment.

To adjust a device, the readout of the measurement instrument (actual value) is as well as possible leveled to the reference value (setpoint) to obtain a correct readout. Measurement deviations concerning several measuring points are saved to the ALMEMO® plug as fine adjustment. In this way it is possible to significantly increase the measurement accuracy of e.g. inexpensive standard sensors.

Two-point adjustment

Sample table Two-point adjustment at 0°C and 100°C

(using the parameters ZPC = zero-point correction / SC = slope correction)
example given: ZPC = -0,20 / SC = 1.0010

1. Start of meas. range	-200	-200	
2.	-20	-20.25	-20.07
3.	0.00	-0.20	0.00
4.	50.00	49.80	50.05
5.	100.00	99.75	100.00
6.	150.00	149.60	149.95
7. End of meas. range	400.00	400.00	

Readout values concerning zero point and slope are corrected.

Multi-point adjustment

Sample table multi-point adjustment at all five meas. points

Measuring range PT100 204 (-200.00°C to 400.00 °C)			
basic value	**setpoint**	**actual value**	**corrected value** (= readout on test device)
1. Start of meas. range	-200	-200	
2.	-20	-20.25	-20.00
3.	0.00	-0.20	0.00
4.	50.00	49.80	50.00
5.	100.00	99.75	100.00
6.	150.00	149.65	150.00
7. End of meas. range	400.00	400.00	

Multi-point adjustment allows to exactly correct the readout values to the reference values.

1. By default, a linear interpolation between the endpoints of the adjusted range and the device-specific upper and lower measuring range limits is carried out.
2. Optionally it is possible to disable any measurement outside the adjusted range (i.e. no incorrect measurements outside the adjusted range). The device will only signalize whether the result is exceeding or falling below the measurement range.

Input connectors and adapter cables

Usage
In case reference or correction values are available, the user can carry out the multi-point adjustment by himself. By means of the free software ALMEMO® CONTROL a correction table is converted to an interpolation table containing over 30 basic values and saved to the ALMEMO® plug. Using the function "consider correction value zero and gradient" the readouts of a pre-scaled sensor are corrected. This procedure requires an ALMEMO® device (e.g. ALMEMO® 2690-8) featuring the option "KL" (multi-point adjustment and special measuring ranges).

Sensor with multi-point adjustment

ALMEMO® plug with 4K EEPROM. Characteristic curve and sensor characteristics are saved to the plug

The correction table programmed on the ALMEMO® plug can be saved as a file to the PC and additionally as an Excel table for archiving purposes. Of course, it is possible to load the correction table again from the archived file as well as from the ALMEMO® plug. Consequently, the user is able to access his multi-point adjustments at all times.
Hand units from series ALMEMO® 2450, 2470, 2490 as well as 2590 are already able to process ALMEMO® plugs with a programmed multi-point adjustment as standard. For sensors that have special linearizations saved on the ALMEMO® plug, a multi-point adjustment is not possible.

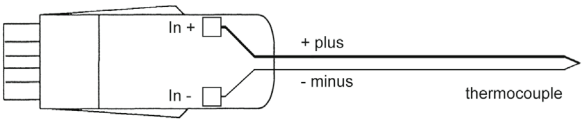
Calibration
During the calibration of the ALMEMO® measuring technology, the sensor deviation is determined in every calibration point and saved as correction value to the ALMEMO® plug. The measured values for such multi-point adjusted sensors are then listed in the calibration certificate. Compared to the reference values, the identified sensor deviations are close to zero. Measurements within the calibrated interval can then be carried out with minor deviations. The measured value displayed on the ALMEMO® measuring instrument is the already corrected value and can be used directly. It is not necessary anymore to correct the displayed measured value on the basis of the calibration certificate.

Input connectors and adapter cables

Digital ALMEMO® D7 measuring connector for thermocouple sensors of type K, N, T, J, R, S, B, E

Measure dynamic temperature changes with up to 100 measurement operations per second.
One single connector for different thermocouple types (programmable).
Optimal linearization accuracy of the thermocouple characteristic by calculation methods as per the DIN IEC 584.
Increased accuracy thanks to multi-point adjustment of the thermocouple sensor during calibration. For current measuring instruments ALMEMO® V7, i.a. the precision measuring instruments ALMEMO® 710 or ALMEMO® 202.



Technical data and functions

- The digital ALMEMO® D7 measuring connector for thermocouples can be used for a variety of thermocouple types. Once connected, the thermocouple type is programmed via the ALMEMO® V7 measuring instrument.
- *new:* the range for thermocouple type E. For use at lowest temperatures.
- The thermocouple is connected via 2 screw terminals integrated in the measuring connector. Every measuring connector has an integrated temperature sensor directly in the screw terminals for measurement and automatic compensation of the cold junction temperature.
- The input of the ALMEMO® D7 measuring connector is galvanically isolated from the ALMEMO® V7 measuring instrument. Therefore the connected thermocouple sensor is galvanically isolated from the other connected ALMEMO® sensors as well.
- The digital ALMEMO® D7 measuring connector operates with its own integrated A/D converter. The linearization of the thermocouple characteristic is calculated using an error-free method in compliance with DIN IEC 584 (not an approximation).
- For measuring dynamic temperature changes, the ALMEMO® D7 measuring connector operates at a fast conversion rate. The measuring rate is determined exclusively by the integrated A/D converter.
- On the ALMEMO® V7 measuring instrument all D7 measuring connectors operate in parallel - each at its own measuring rate. The measuring instrument`s very short scan cycle is determined by the measuring rates of the D7measuring connectors - nearly irrespective of their number. The ALMEMO® V7 measuring instrument saves the measured values; the measuring software WinControl displays them graphically.
- The overall accuracy of the measuring operation is unaffected by the presence of an ALMEMO® V7 display device / data logger. In case the measuring chain - consisting of a thermocouple sensor and the connected ALMEMO® D7 measuring connector - is calibrated, the measuring chain can be connected to any ALMEMO® V7 measuring device without any additional measuring uncertainties.
- At constant ambient conditions, an increased system accuracy is achieved by calibrating the thermocouple sensor using multi-point adjustment.
- To designate a sensor it is possible to program comments with up to 20 characters.

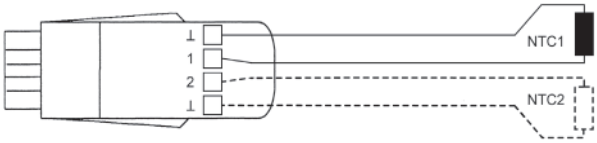
Digital ALMEMO® D6 measuring connector for temperature sensors NTC

High levels of precision and resolution 0.001 K across measuring range -20 to +65 °C
Linearization of the NTC characteristic - calculated error-free using Galway Steinhart coefficients
Increased measured value accuracy - thanks to multi-point adjustment of the NTC sensor during calibration
For all ALMEMO® V6 and V7 measuring instruments, including ALMEMO® 2490 and ALMEMO® 202.



Technical data and functions

- The digital ALMEMO® D6 measuring connector uses its own integrated A/D converter. Linearization of the NTC characteristic is calculated error-free using the Galway Steinhart coefficients (not an approximation). Across measuring range -20 to +65 °C this produces the very high resolution of 0.001 K.
- The digital temperature sensor reaches this high level of precision irrespective of any extension cables used and of any processing in the ALMEMO® display device / data logger. Overall accuracy is determined exclusively by the NTC sensor and the ALMEMO® D6 measuring connector. This increased measured value accuracy is achieved by subjecting the NTC sensor to multi-point adjustment during calibration.

New:
With the ALMEMO® D6 measuring plug, customer-specific NTC sensors can be connected to the Almemo® system after the corresponding Steinhart-Hart coefficients have been configured via the sensor menu.
When using own sensors with 10 kOhm resistance at 25 °C, no additional adjustment of the connector is necessary (sensors with different resistance values on request).
